## Weighing platforms

model BPU

## Model BPU

### General features

■ Platforms of the BPU series are intended particularly for weighing goods on transpallet trucks. These are compact and essentially lightweight units of proven mobility, equipped as standard with durable wheels and corner handles.

Weight is measured by means of 4 stainless steel load cells to IP 67 or IP 66 specification. The platform itself comprises a solidly constructed frame of box section mounted on stainless steel levelling feet associated directly with the load cells: simple, functional, and entirely maintenance-free.

BPU platforms are made in 3 versions: paint-finished, hot-dip galvanized, or AISI 304 stainless steel for duties in aggressive environments, and can be used in conjunction with all the terminals of the "Evoluzione 2000" and "Dialogica" series.

## Model BPU

### Engineering features

- Capacity from 600 to 3000 kg
- Mobile platform with handles and wheels
- 4 load cells, all stainless steel
- Adjustable stainless steel levelling feet

### Optionals

- Version with galvanized platform
- Version with stainless steel platform
- Multirange version
- High resolution version (for internal use) giving up to 10,000 divisions.
