

Location: Stafford Fuels, New Ross, Co. Wexford

Year: 2020

Product: GlobeWeigh Eurodeck Weighbridge & Software

Stafford Fuels Ltd have been heating homes in Ireland for over 100 years. Their company success is attributed to supplying the wholesale solid fuel market with only the highest quality fuels available.

The Project

Stafford Fuels weighbridge has been in operation for 20+ years and was at the stage of needing replaced. In addition to the weighbridge they required a new software package to weigh customers and the offloading of ships.

Our Experience

GlobeWeigh has been manufacturing weighbridges in Co Armagh for 25 years. We were chosen as the preferred supplier due to our hardware and software expertise. GlobeWeigh partner with Europe's leading weighbridge manufacturer's Co-op Bilanciai.

Our design approach ensures there is always a weighbridge and software system for your application.

The Result

Once manufactured the new weighbridge was delivered to site and craned into position. When on site our team of site staff installed the weighbridge to allow Stafford Fuels to finish off site levels and ramps. Once the civil was complete GlobeWeigh engineers connected up the Bilanciai load cells and DD700 indicator. This was then connected to the network and linked to our Aweighsys weighbridge software.

The software was installed on multiple PC's for operation and reporting. It allows for recording all incoming material from ships and for Stafford Fuels to monitor total tonnage offloaded at any time. Our NSAI approved test unit then visited site to carry out the verification.
